⑤ Advantage of Agile method

1) Check Points :-

Consider an example where we have to dev.
a module & module has sub modules.

```
[I]--O--[II]--O--[III]--O--[IV]
      |        |          |
    Check    Check      Check
    Point    Point      Point
```

(i) In V model, if at the time of production if any
defect occure, then developer have to do post
mortom testing.

(ii) But in the agile method when any problem occure
at time of production tester check the check point
so he no post mortom testing required.

(iii) If I is starting phase & IV is end phase when,
at the time of product error accure, then tester
check chk point betn I & II , if it is correct then
he check II & III. if defect occure in this check
point , then tester send it to developer.

(ii) Developer then click on that check point & coding
appears , then at the defect, #code is highlited with
red color.

(iv) To check the check point, tester use BVAS tool.

2) Scrum meeting

↳ Daily status call meeting.

↳ Time for meeting either (10:30 to 11 or 11 to 11:30)

↳ This meeting daily conducted for 15 to 30 minutes.

↳ People involved :- Scrum Master (Chair Person)
                     Testing Team
                     Development Team
